

# Thick Red Stew

**Goal:** Draw your very own thick red stew

**You will need:**

- Random Number Generator (look below for ideas)
- Paper
- Color Pencils or markers

**What to do:**

- You will be drawing your own thick red stew!
- Draw a kitchen pot.
- Choose 5 to 10 different food items you want to put in your stew.
  - For example, you can pick potatoes, tomatoes, carrots, shrimp, celery, etc.
  - What other food items would be good?
- Use your chosen random number generator to produce a number for each food item you want to draw for your stew. This number will be the number of times you will draw your chosen food item(s).

**Alternative ways:**

- Use construction paper to make a collage of the kitchen pot and food items.
  - You can be as creative as you want. Be abstract with the collage and cut out different shapes to make the pot and food items. For example, ten tiny orange triangles when laid in a straight line could be a carrot.

**Random Number Generator Ideas:**

- Write 1 to 10 on individual pieces of paper and place into a hat.
- Type on a smart phone or computer “Random Number Generator,” set the numbers to be between 1 to 10.
- Write 1 to 10 on a piece of paper and close your eyes and point to a number at random.
- Use a dice.
